What Lies Beneath

What Lies Beneath stands proud looking out over the ocean, protecting her realm from threats. Her garment shows the vibrant wonderland of the Great Barrier Reef hidden under a cape of ocean waves. The garment aims to inspire the viewer to help protect the coral reef by reminding them of its bright coral, seaweed and wonderful sea creatures.

What Lies Beneath consists of three elements, including a cape, pants and a corset. The cape is made from tulle, cascading in waves and ripples into a train. Adorned with water droplets created with glass beads. The cape showcases the student's bright jellyfish, made from mixed materials.

The corset is made from repurposed denim laced at the back. The corset and pants feature coral and seaweed made from calico and mixed mediums, over lapping and weaving over both elements to create a healthy coral reef. Nestled within the coral are hand crafted sea creatures made from polymer clay and mixed mediums.
